Technical workshop for GCF project: Climate change and climate change impacts on São Tomé and Príncipe with a focus on fishery and tourism sectors in a Blue Economy context

Sao Tome and Principe, November/December 2025

TRAINING OPTIONS

By: Riccardo Soldan and Samuel Greenrod

Potential trainings

Training title	Main objective	Key tools / topics covered	Target audience
Climate Science for Climate Action	Provide an overview of the key information needed to produce climate risk assessments and study the impact of climate change	key climate and ocean datasets, basic risk assessment concepts. Mostly theoretical	Ministry staff, fisheries & agriculture services, NGOs, FAO
Hands-on Training on tools for Climate and Sectoral Risk Assessments	Build practical skills to run, visualise and interpret climate risk analyses for crops and fisheries using a wide set of tools.	CAVA platform (web/R/Python), basic analytics workflow	Technical staff from ministries, research institutes
Applying Crop Models and Climate Information for Climate-Smart Agricultural Planning	Translate model outputs into practical climate actions (e.g. sowing date, irrigation timing/frequency, variety choice).	AquaCrop results, CAVA outputs, climate indicators, agronomic decision rules	Technical planners, extension officers, project designers
Climate Impact Modelling and Risk Assessment for Fisheries and the Blue Economy	Enhance capacities to assess climate impacts on fish stocks and fisheries-dependent livelihoods and to explore adaptation options.	Ocean/climate indicators, Species Distribution Modelling, Impact modelling	Fisheries department staff, Blue Economy units, marine researchers, FAO
