

Climate change and climate change impacts on São Tomé and Príncipe with a focus on fishery and tourism sectors in a Blue Economy context

Report Adaptation Recommendations Questionnaire

Adaptation recommendations

- Adaptation recommendations are based on the GCF readiness report on climate impact on fishery and tourism sectors in STP.
- Recommendations should be assessed in context of report findings.

Scoring system and comments

- Adaptation recommendations should be scored from 1/5 based on its relative importance for climate adaptation
- Comments should be left for suggested changes to activities or to clarify scoring.

Fisheries

Infrastructure

Activity	Score (1 / 5)	Comments
Construction of fishing ports		
Building of retail markets with refrigerated storage and preparation hygiene rules		
Construction of a workshop for fishing boats		
Construction of manufacturing unit for essential fishing materials		

Development of road networks between fishing ports		
---	--	--

Protection of fish species

Activity	Score (1 / 5)	Comments
Development and enforcement of marine protected areas		
Responsible use of moored fish aggregating devices (FADs).		
Regulatory framework to avoid over-fishing: • Returning juveniles • Use of unweighted purse seine fishing methods • Catch limits • Limits on number of fishing vessels		

Additional suggestions:

Tourism

Coastal erosion/rising sea levels

Activity	Score (1 / 5)	Comments
Construction of dikes, breakwaters (e.g gabions), and protective walls in most vulnerable areas.		
Creating safe expansion zones for coastal communities.		
Establishment of a climate alert system on the state of the sea		
Rehabilitation of tide stations		
Sand dredging to repair eroded beaches		
Diversification of activities and support measures for populations whose livelihoods depend on coastal activities		
Construction of drainage ditches and water tanks		

Ecotourism

Activity	Score (1 / 5)	Comments
Coral reef vulnerability assessment: • Mapping reef resilience • Identifying storm sheltered areas • Assessing ocean variables for reef vulnerability		
Diving regulations including: • Limitations on the number of divers per site or per day • Prohibition of coral contact or the use of overly aggressive fins • Mandatory use of reef-safe sunscreen • Sustainable anchoring practices (use of buoys instead of anchors to avoid seabed damage) • Education for tourists and guides on the environmental impact of their actions.		
Regulatory framework for diving schools: • Licensing or authorisation for dive operators • Minimum sustainability and safety criteria • Designation of no-fishing or restricted recreational		

zones in the most sensitive reefs • Monitoring, enforcement, and sanctions for proven environmental damage. • Eco-certification for dive operators based on sustainability standards
